

Task acceptance criteria rewrite

Illustrative source input

These small fixture records are fictional. They show the input shape and the decisions a reviewer must make. They are not data exported from a connected customer account.

Task	Ambiguity	Approved behavior
P01	fix cart	valid quantity 1-99
P02	send reminder	recipient list unapproved
P03	add search	no empty-state specification

Review rule

Proposed acceptance criteria are not test results or implementation. Missing business rules remain questions.

Task acceptance criteria rewrite

Worked output excerpt

Source or item	Delivered observation or proposed result
P01	Given a cart, changing quantity to 1-99 recalculates the displayed total.
P02	hold send criteria until recipients are approved
P03	flag empty-state behavior as a question

How to inspect this example

Compare each result with its source row. Missing information stays unresolved. Proposed changes remain separate from observed facts. Download the accompanying JSON to inspect the input and output without a screenshot.

Scope of this sample

This is a shared, app-neutral worked excerpt, not a complete paid package, a client case study or a live integration test. A real delivery uses the agreed source files, quantities, formats and acceptance checks. Application-specific export schemas and connected permissions must be verified separately.
