

API contract and fixture handoff

Illustrative source input

These small fixture records are fictional. They show the input shape and the decisions a reviewer must make. They are not data exported from a connected customer account.

Case	Request	Expected behavior
API01	missing required ID	declared 400
API02	valid example ID	declared 200
API03	expired token	declared 401

Review rule

These are expected fixture outcomes, not results from a live API call. Verify against the actual API version before deployment.

API contract and fixture handoff

Worked output excerpt

Source or item	Delivered observation or proposed result
API01	fixture documents invalid-input response
API02	response schema fixture attached
API03	credentials excluded from fixture

How to inspect this example

Compare each result with its source row. Missing information stays unresolved. Proposed changes remain separate from observed facts. Download the accompanying JSON to inspect the input and output without a screenshot.

Scope of this sample

This is a shared, app-neutral worked excerpt, not a complete paid package, a client case study or a live integration test. A real delivery uses the agreed source files, quantities, formats and acceptance checks. Application-specific export schemas and connected permissions must be verified separately.
