

Field mapping and import preflight

Illustrative source input

These small fixture records are fictional. They show the input shape and the decisions a reviewer must make. They are not data exported from a connected customer account.

Source field	Observed value	Destination type
contact_id	0017	text
start_date	03-04-26	date
stage	awaiting_reply	enum

Review rule

A valid file is not proof that the destination accepts it. Obtain the actual destination field dictionary and test in a sandbox before importing.

Field mapping and import preflight

Worked output excerpt

Source or item	Delivered observation or proposed result
contact_id	retain 0017 / do not coerce
start_date	hold / ambiguous locale
stage	map only after owner approves target value

How to inspect this example

Compare each result with its source row. Missing information stays unresolved. Proposed changes remain separate from observed facts. Download the accompanying JSON to inspect the input and output without a screenshot.

Scope of this sample

This is a shared, app-neutral worked excerpt, not a complete paid package, a client case study or a live integration test. A real delivery uses the agreed source files, quantities, formats and acceptance checks. Application-specific export schemas and connected permissions must be verified separately.
